

OVERVIEW

# Description

Modals, a fundamental component of our design system, are dynamic and interactive dialog boxes that enhance user interactions within applications. These versatile pop-up windows serve various purposes, such as presenting detailed information, collecting user input, or confirming critical actions.

By overlaying content on the existing interface, modals provide a seamless way to engage with additional information or tasks while maintaining context. With customizable options and styles, our modals ensure a cohesive and user-friendly experience throughout your application.

## Significant Features of Modals

Here's what you need to know about the noteworthy features of Modal component.

### Modal Header Variations

Include customizable headers, available in both default and status modal header styles. You can choose from various sizes and easily customize icons and text to suit your design needs.

### Modal Footer Options

Offers diverse footer options, including double buttons, checkboxes, link buttons, and more. You'll have the flexibility to select the most suitable footer style for your modal.

### Status Modals

For scenarios requiring status indication, we provide pre-designed status modals for different statuses: success, error, feature, and more. These modals come complete with associated icons to convey the status effectively.

COMPONENTS

## Modal Header

A header element specifically designed for modal dialogs, providing an organized title.

COMPONENTS

## Modal Footer

A footer element tailored for modal dialogs, housing action buttons and more within the dialog interface.

COMPONENTS

## Status Modals

Modal dialogs for clear, concise communication of status updates, like success messages or warnings.

COMPONENTS

## Modal Overlay

Visual component used when a modal appears on the screen.
