

OVERVIEW

Description

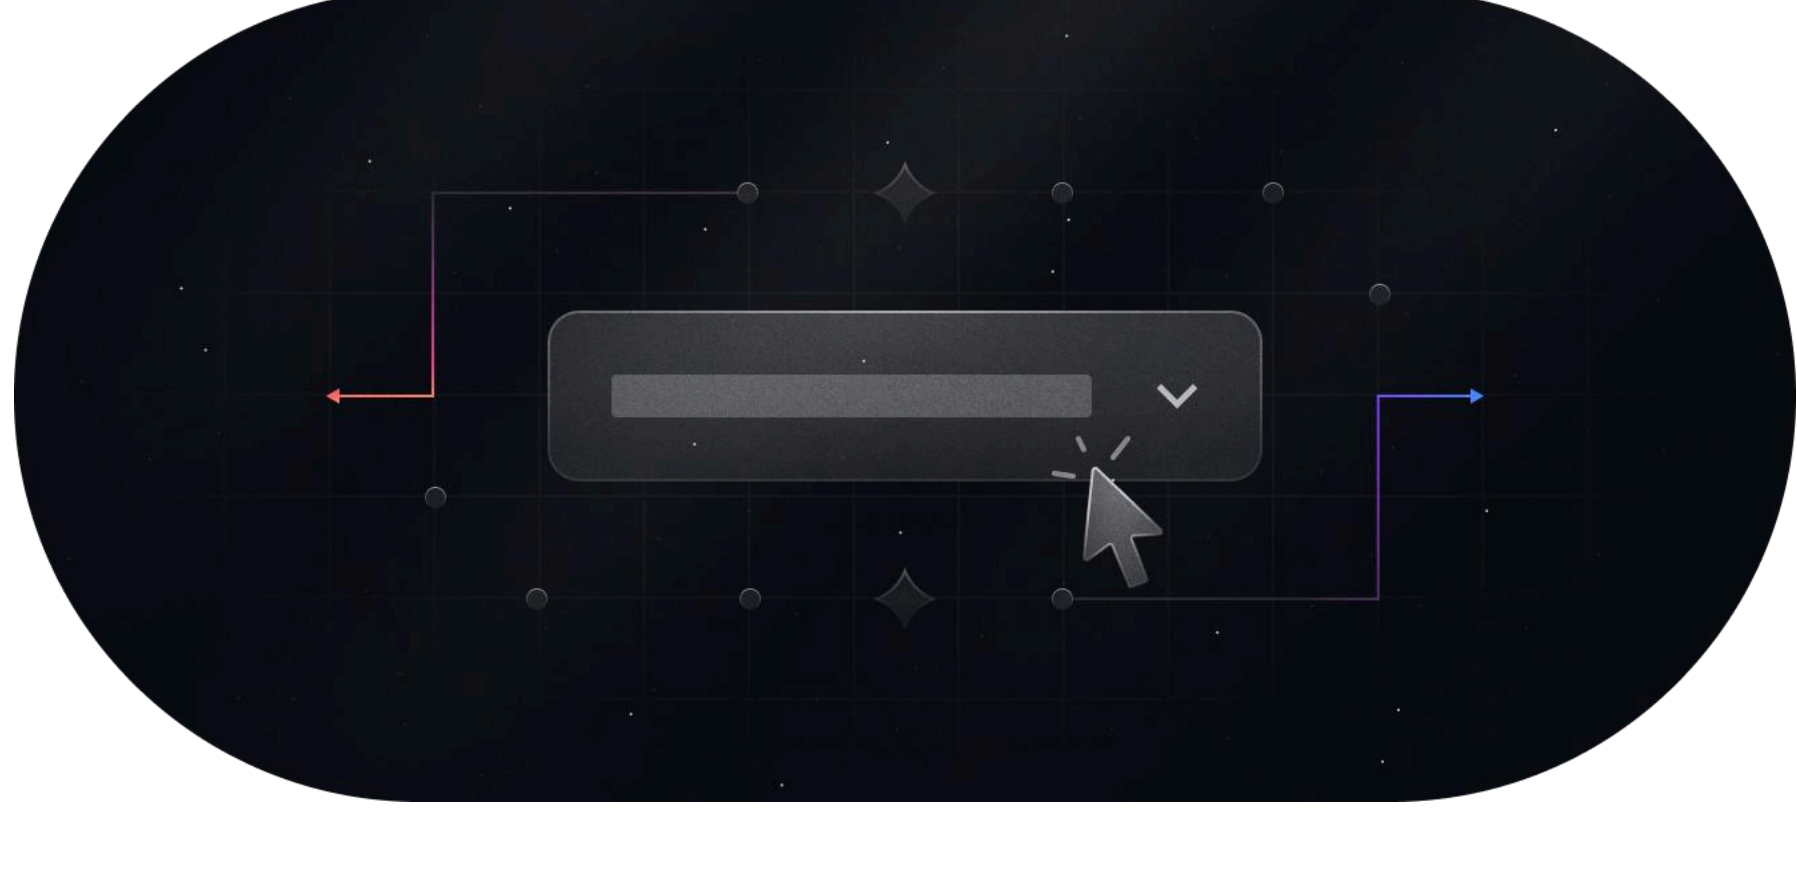

The Select component in our design system serves as a versatile tool for selecting options or actions within your user interface. We've expanded its functionality by incorporating alternatives such as icons, country flags, avatars, and more, making this component as comprehensive as possible.

Additionally, we've included select items that provide a seamless way to display a list of actions or items when the Select is activated. This comprehensive approach ensures that you can tailor the Select component to meet your specific design needs, whether you're building a simple Select menu or a feature-rich interactive element.
