

OVERVIEW

Description

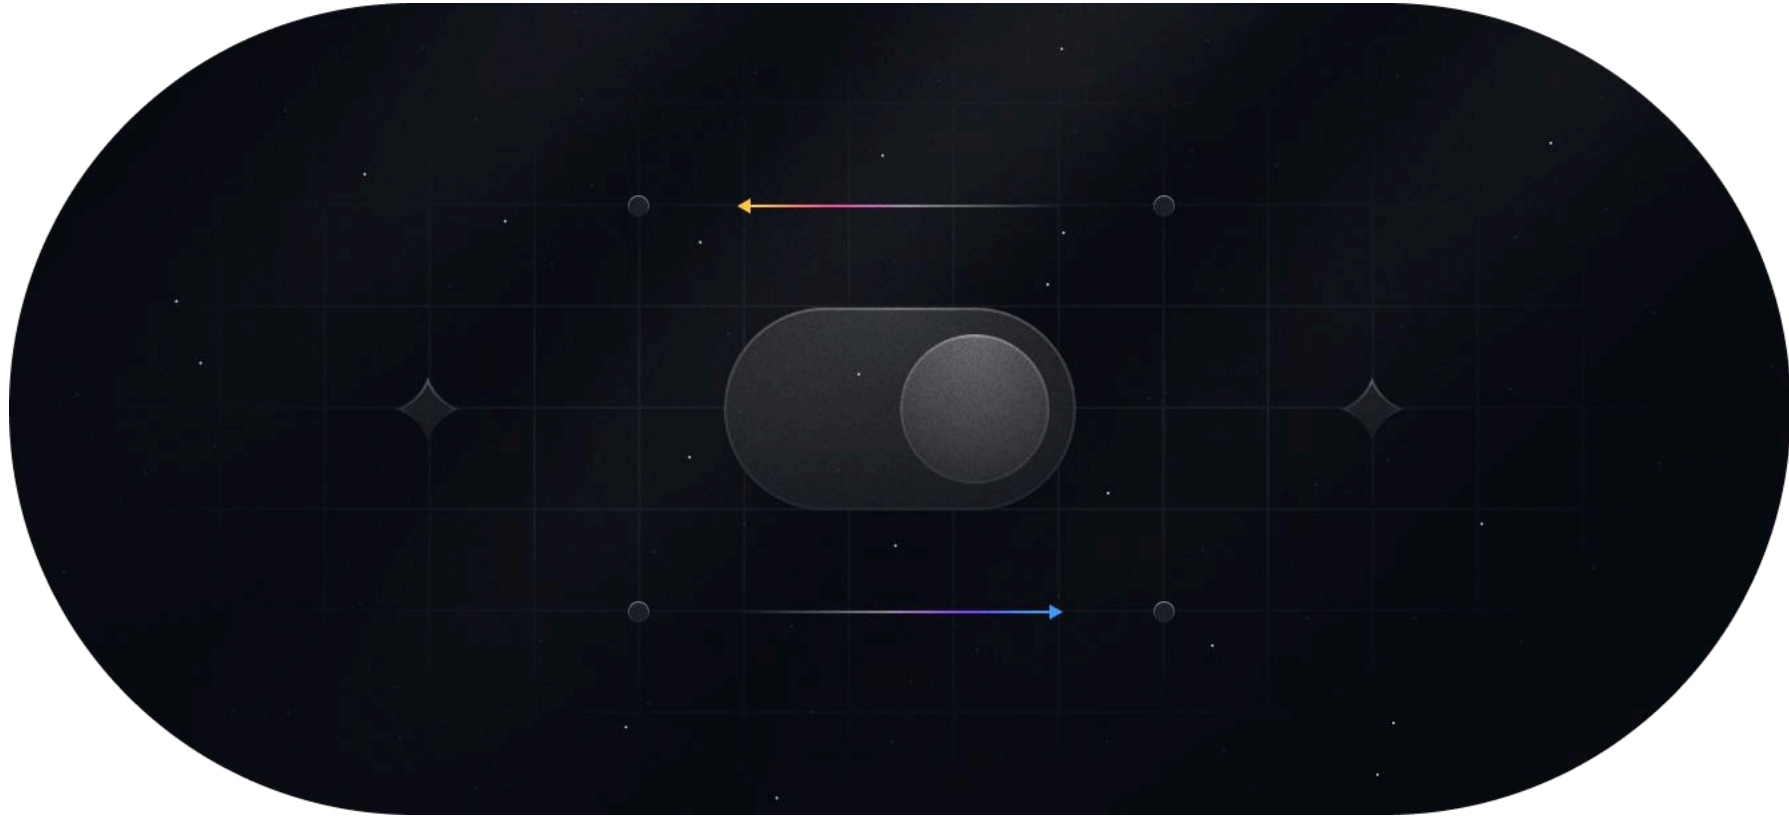

The Switch component is a user-friendly and interactive element that enables users to switch between two states, typically "on" and "off". It serves as a practical tool for enabling or disabling specific features or options within your application.

In our design system, we have enhanced Switch components with labels, cards, and integration cards offering enhanced diversity and versatility for your design projects.

Significant Features of Switch

Here's what you need to know about the noteworthy features of Switch component.

Distinct State Options

The Switch Component offers distinct states, allowing users to easily switch between "on" and "off" positions and more to provide clear visual feedback and enhance user control.

Switch Label & Card

Enhance Switch components with labels for textual context and utilize switch cards to integrate icons, avatars, card providers, brand logos, placeholder logos, and more options.

Integration Switch

The Integrated Switch Card feature offers users a straightforward way to enable or disable integration apps. Available in both list and card styles, it allows users to select their preferred presentation format.

COMPONENTS

Switch

For easily switching between on and off, enhancing user control.

COMPONENTS

Switch Label

Enhances Switch by adding text for better clarity.

COMPONENTS

Switch Card

Combines switch with cards, ideal for avatar, icon selections, and more.

COMPONENTS

Integration Switch

Effortlessly enables or disables functionality for integration apps.
