

OVERVIEW

Description

The Time Picker is a fundamental component that enables users to make precise time selections with ease. It serves various time selection scenarios in the user interface, such as scheduling appointments, setting meeting times, and configuring focus periods. It offers a wide range of functionality from single time point selection to duration setting and status management.

Time Picker is suitable for both simple time selections and complex time range determinations with its flexible structure. While providing a user-friendly experience in the interface, it also offers high customization capabilities to developers.
