

OVERVIEW

Description

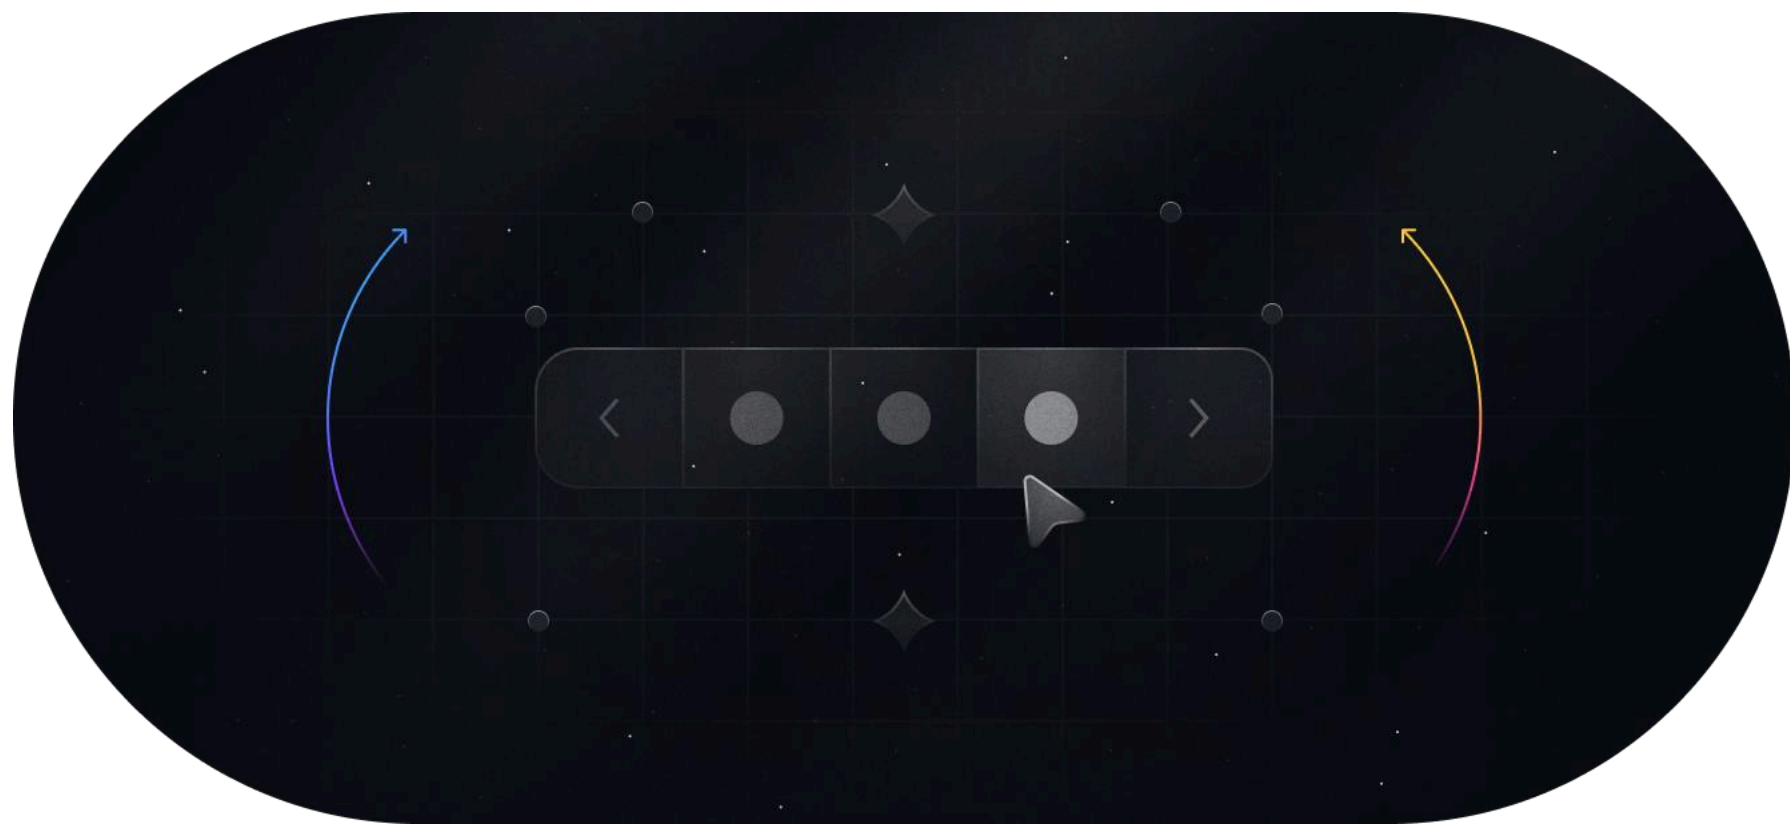

Pagination is a vital navigation component within our design system, crucial for organizing and presenting content in a user-friendly manner. It plays a pivotal role in breaking down extensive data sets, such as search results or lengthy lists, into easily digestible pages. This not only enhances the user experience but also optimizes the accessibility of information.

Notably, the Pagination Group component seamlessly integrates with tables, enhancing the synergy between navigation and data presentation. This ensures a harmonious and efficient user experience when working with tables and navigating through diverse data sets.

Significant Features of Pagination

Here's what you need to know about the noteworthy features of Pagination component.

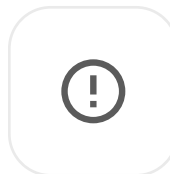

Comprehensive Pagination Group

The Pagination Group component allows users to navigate through multiple pages at once, providing an efficient access to various sections of content.

Seamless Integration with Tables

The Pagination component seamlessly integrates with tables, facilitating smooth navigation and exploration of data sets in conjunction with tabular presentations.

Advanced Display Options

Pagination Group provides advanced options like First/Last buttons, Next/Previous toggles, and more, to offer flexibility to tailor pagination to specific user preferences.

COMPONENTS

Pagination Cell

Individual page number representation within Pagination Group, adapting to various states.

COMPONENTS

Modal Footer

A footer element tailored for modal dialogs, housing action buttons and more within the dialog interface.
