

OVERVIEW

Description

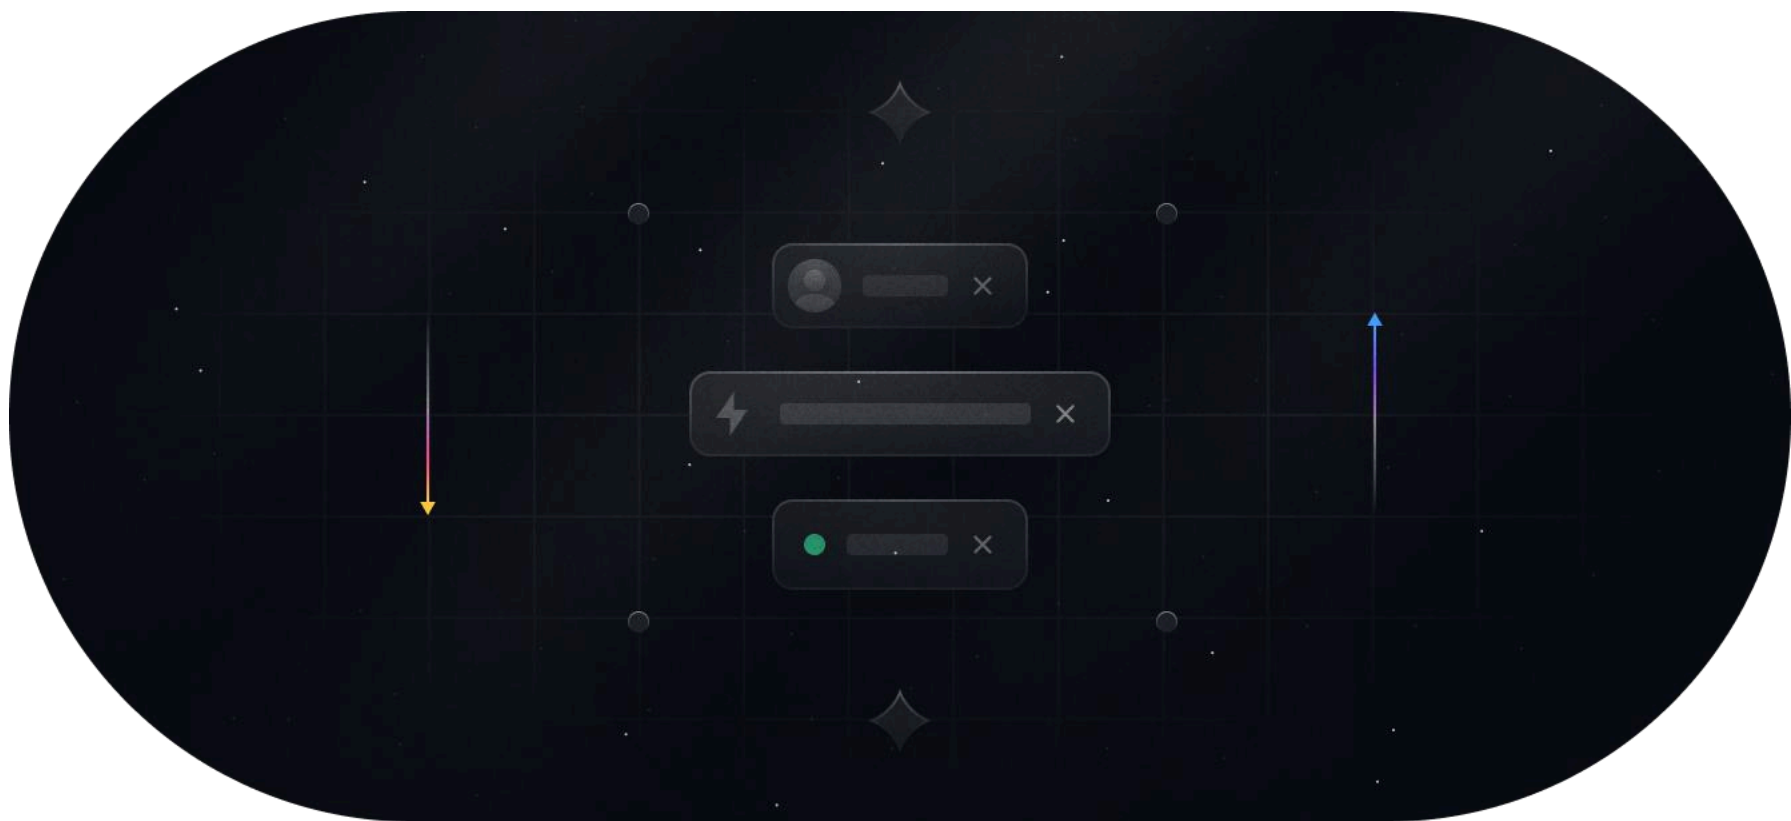

The Tag component is a versatile tool for categorizing and labeling content within your application. It provides a simple and efficient way to make it easier for users to identify and access specific topics or categories.

In our design system, Tags come in various styles and can be customized to match your application's aesthetics. Additionally, Tags are clickable, offering an interactive element for users to navigate or filter content conveniently.

Significant Features of Tag

Here's what you need to know about the noteworthy features of Tag component.

Tag with Clickable Items

Tags in the Tag Component offer clickable items with a close icon, allowing users to easily remove or interact with specific tags. This feature enhances user control and flexibility in managing tagged content.

Tag and Text Input Integration

The Tag Component seamlessly integrates with text input, featuring a Tag Input element. Users can type and select tags, streamlining the process of categorizing content and simplifying content management.

High Customizability

The Tag Component provides a high level of customizability, offering various styles and the option to add a left icon. This versatility allows users to match their application's aesthetics and branding.
