

OVERVIEW

Description

The Text Area component is a fundamental element for capturing and displaying multi-line text input within your application. It serves as a versatile and user-friendly tool for gathering textual information, such as comments, descriptions, or longer-form text.

In our design system, our Text Area component offers state options, enabling you to indicate various states of the component. Additionally, it provides a character counter option that enhances the user experience.

FREE COMPONENT

Code Library

Technical features and capabilities of the Text Area component

Radix UI Integration

Built on Radix UI's accessible primitives

Polymorphic Components

Customizable elements with 'as' prop support

Built with React

Built with modern React architecture

Styled with Tailwind

Built-in animations and responsive styles

Significant Features of Text Area

Here's what you need to know about the noteworthy features of Text Area component.

Distinct State Options

Offers distinct state options, including default, hover, error, and disabled, allowing you to visually represent different states for improved user interaction and feedback.

Integration with Ratings

Integrates with other components, especially Ratings, enhancing the user experience in applications where user-generated content and feedback are quite significant.

Character Counter

Includes a character counter feature, providing users with a clear count of characters as they input text. This feature is invaluable for applications where character limits or content length control is essential.

COMPONENTS

Text Area

Versatile tool for capturing and displaying multi-line text input within your application.

Character Counter

Provides a character count for efficient content management within the Text Area.
